**Important:** This policy governs Wardright LLC public web properties and business-facing services only. Federal solicitations, awards, subcontracts, NDAs, statements of work, and other executed agreements control where their terms conflict with this public policy.

Wardright Reference Systems are public technical demonstration environments built and operated by Wardright LLC. This Notice explains their purpose, provenance, permitted use, data boundaries, and relationship to Wardright contracting materials.

Important: Wardright Reference Systems use synthetic demonstration data and scenarios. They are not customer or federal past performance and are not production systems for operational use.

## 1. Covered Reference Systems

This Notice applies to Wardright Atlas at atlas.wardright.com, Wardright Relay at relay.wardright.com, Wardright Forge at forge.wardright.com, and future Wardright-operated public systems expressly identified as Reference Systems.

## 2. Purpose and Provenance

Reference Systems demonstrate Wardright engineering capability through working software, data, geospatial, workflow, integration, document-processing, and operational-system patterns. Scenarios, organizations, records, incidents, assets, documents, readings, events, and outputs presented in these systems are synthetic demonstration material unless expressly stated otherwise.

## 3. No Past-Performance Representation

A Reference System may be cited as a Wardright-built demonstration of technical capability. Its existence, interface, scenario, data, or output must not be interpreted as identifying a government customer, contract award, subcontract, production deployment, endorsement, or federal or customer past performance. Any actual past performance will be identified separately and accurately in the relevant contracting material.

## 4. Disposable Workspaces and Availability

Reference Systems may create isolated disposable visitor workspaces through strictly necessary session identifiers. Workspaces, submissions, state, and generated artifacts may expire, reset, be deleted, or become

unavailable. Wardright may change, suspend, rate-limit, or withdraw a Reference System at any time for security, maintenance, capacity, legal, or business reasons.

## 5. Forge and Demonstration File Uploads

Forge is a document and data processing Reference System. Submit only synthetic, non-sensitive demonstration files of supported types. Do not upload confidential, proprietary, personal, classified, Controlled Unclassified Information (CUI), export-controlled technical data, source-selection or procurement-sensitive information, credentials, customer production data, regulated information, malware, exploit files, weaponized documents, or other malicious or sensitive content.

## 6. Processing and Outputs

Reference Systems may validate, normalize, extract, transform, route, review, simulate delivery, generate outputs, or maintain demonstration audit records. Outputs are demonstrations and may be incomplete, simplified, synthetic, reset, or intentionally constructed to exercise exception paths. Do not rely on them for operational, safety, security, legal, procurement, engineering, compliance, or production decisions.

## 7. Security and Acceptable Use

Use is subject to the Wardright Terms of Use and Acceptable Use Policy. Do not bypass workspace isolation, rate limits, access controls, or technical restrictions; conduct unauthorized vulnerability testing; interfere with service; scrape in a manner that defeats controls; or introduce malicious content.

## 8. Privacy and Temporary Data

Wardright may process network and security data, strictly necessary session identifiers, demonstration workspace state, and - where a Reference System accepts them - temporary submissions and generated artifacts as described in the Privacy Policy and Cookie Policy.

## 9. Intellectual Property

Wardright names, marks, logos, interfaces, visual systems, software, documentation, demonstration scenarios, and original materials remain owned by or licensed to Wardright LLC except where third-party rights are identified. No ownership interest is transferred by access to a Reference System.

## 10. Contact

Legal, security, accessibility, and Reference System inquiries: contact@wardright.com. Business telephone: 405-283-6008. Website: https://wardright.com.
